CENTRE FOR STUDY OF SOCIAL EXCLUSION AND INCLUSIVE POLICY

UNIVERSITY OF MYSORE, MYSORE

Ph: 09880964840, 0821-2419637/687/362

CONCEPT NOTE

Public health services, which reduce a population's exposure to disease through such measures as sanitation and vector control, are an essential part of a country's development infrastructure. For various reasons, mostly of political economy, public funds for health services in India have been focused largely on medical services, and public health services have been neglected. This is reflected in a virtual absence of modern public health regulations and of systematic planning and delivery of public health services. Various organizational issues also militate against the rational deployment of personnel and funds for disease control.

There is strong capacity for dealing with outbreaks when they occur, but not to prevent them from occurring. Impressive capacity also exists for conducting intensive campaigns, but not for sustaining these gains on a continuing basis after the campaign. The aforementioned cases involve the longstanding issues of public health, or classical public health, such as environment, occupational health, food safety, and maternal and child health, as well as clinical medicine. Risk reduction is multifaceted and extends to health policy and targets, legislation, multidisciplinary public health training and workforce development and the links between these. The public health challenges being faced by the country call for the development of capacity in the health systems of the Central and State Governments by way of positioning qualified professionals who can execute and monitor national health policies and programmes, supervise the public health workforce, fully assess the dimensions of public health issues and devise appropriate strategies to meet emerging challenges. There is a need to devise programmes like this kind of workshop which will impart the skills required to tackle the existing and emerging public health challenges and enhance the capacity of the public health managerial workforce (from different sources).

OBJECTIVES:

- To sensitize the medical and non medical research professionals about emerging issues in public health in India.
- To create a enhanced understanding and solutions of key public health challenges within the Indian public health community.
- To shed the light on the importance of public health and the use of new public health approaches for promotion of inclusive community health in the country
- To train educate, develop and renew the participants with the most recent knowledge and techniques available to cure common public health issues
- To identify the gap between knowledge and practice with respect to changing public health scenario
